KIT

» Background

STANDARD Q COVID-19 Ag Saliva Test is a rapid chromatographic immunoassay for the qualitative detection of specific antigens to SARS-CoV-2 present in human saliva specimen. This test is an aid to early diagnosis of SARS-CoV-2 infection in patient with clinical symptoms with SARS-CoV-2 infection.

» Specimen type

Saliva with mucus

» Advantage

- COVID-19 tests effective in detecting the SARS-CoV-2 variant
- Easy sampling
- Convenient usability
- Fast test result within 15-30 minutes
- Simple test procedure
- No any instruments needed
- Point of Care Testing

Highlight

Use of saliva samples for Covid-19 test at govt hospitals soon — Health Minister

PUTRAJAYA (Feb 18): Deep throat saliva samples will soon be used by some government hospitals for Covid-19 tests, said Health Minister Datuk Seri Adham Baba.

He said that on an evaluation by the Institute for Medical Research (IMR), deep throat saliva had a sensitivity of 96.67% and 100% specificity.
